

It would take 10 stanchions with the industry standard 7.5' belt to match the 75' length of a single SafetyPro 775. Fewer stanchions mean lower purchase cost, faster set up times and less space required for transport and storage. The extra length 75' belt on the SafetyPro 775 makes this stanchion the most cost-effective option available for creating very large safety barriers or cordons. The SafetyPro 775 is fully outdoor capable and features a rugged cast iron base, fitted with a heavy-duty rubber floor protector.

Belt End Options

Standard – connects to another 775 post, a Receiver Post, or a Wall Receiver Clip

Magnetic – attaches to any ferrous metal surface

S-Clip – Wraps around any stationary object and clips back onto the belt

Receiver Post

Provides a low cost post to receive the belt from a SafetyPro 775
